O&Gmuster deployed on FPSO GIRASSOL!

Be-safe.O&Gmuster replaces the obsolete T-card system on FPSO Girassol

On the FPSO GIRASSOL, operated by TOTAL E&P Angola, O&Gmuster replaces the obsolete T-card system characterized by high human error probability, no real time location and an uncertain evacuation time.

In case of an emergency, be-safe.O&Gmuster pacifies and monitors the evacuation process. It represents a real breakthrough in terms of communication optimization and personnel security on oil rigs.

This offshore platform, inhabited by 180 people on board, is equipped with 35 RFID readers and has 4 mustering areas.
