AIRview, on the way to 2017 !

First commissioning of AIRview on Ouesso airport !

By early 2017, Ouesso airport (Congo) will house our AIRview product in its control tower.

The project plans to bring the airport up to the A340-300 standard, build a power plant, set runway lights with a simplified approach (410m) and ATC (tower) equipment, radio system, weather equipment and nav aids.

Add to it the installation of AIRview and its 3 stations (Approach, ATC and Supervisor).

AIRview is specially designed to provide ergonomic workstations fitted with adapted peripherals which enable to improve the ATC's working conditions :

- Optimizing workspace
- Making information accessible in every circumstance
- Benefiting from a better comfort of use
