O&Gmuster soon to be installed in Congo!

It's the final countdown...

O&Gmuster's commissioning on the Moho Nord oil rig scheduled for June 2014!

By this time next month, the Moho Nord offshore rig, which operates at a depth between 820 and 1150 yards (750 to 1050 meters) around 16 miles (30 km) away for the pre-existing Moho-Bilondo, will be fitted with the O&Gmuster technology.

O&Gmuster is specially designed to guarantee the safety of personnel working on industrial sites in harsh environments. This combination of several technologies allows us to reliably address the needs of those who wish to master their emergency evacuation procedure.
