## AIRtouch is now completely operational in Ouesso airport in Congo !

By early 2017, Ouesso airport in Congo, will house our AIRtouch product to control and command the airside systems installed on the runways.

The project plans to bring the airport up to the A340-300 standard, build a power plant, provide runway lights with a simplified approach (410m) and ATC (tower) equipment, radio system, weather equipment and nav aids. All these systems will be steered from the control tower by the last generation AIRtouch software.

**AIRtouch** ITWP offers a unified human-machine interface, modular and ergonomic which gathers all necessary information and operating controls for the controllers to ensure air safety: runway lights, energy, nav aids, weather data, runway condition, aircraft information messages, video-surveillance, access control, alarm management, breach record and instructions, documentation...
